# RestaurantManagementSystem

USING Django Framework

By Shriya Gautam

---

# Framework and Technology:

## ➤ Django

- Django is easy to learn
- Faster compared to other Frameworks
- Django is the Python Framework which is an easy language to use
- 

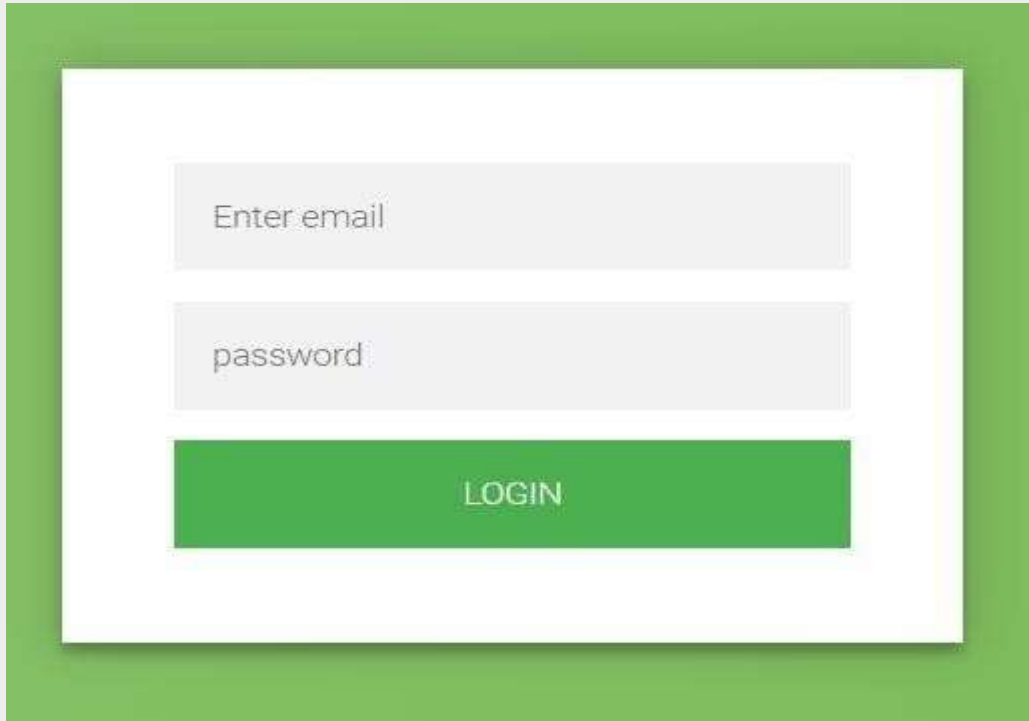

## ➤ SQL

- Easy to handle Databases and Fetch data

## ➤ Bootstrap

- For the Designing of the Web Page of the system

## SIGNUPSCREEN:SuperuserSigns up using credentials

A login form is displayed within a white rectangular area, which is itself centered on a larger green rectangular background. The form consists of two light gray input fields stacked vertically. The top field contains the placeholder text "Enter email" and the bottom field contains the placeholder text "password". Below these fields is a solid green button with the word "LOGIN" written in white capital letters.

The Superuser who manages logins into the management system .

# Profit Analysis

Net profit from sale:

Electricity Bill:

Salary of Staff:

Calculate

Net Profit for the month :

*Profit Analysis page calculates the profit in the current month by deleting the expenses And displays it .*

## Restaurant Analysis

The Restaurant Analysis Page shows the visual representation of the monthly profit of the Restaurant

## ***Methodology:***

***There are in all 6 databases:***

- ***Users***
- ***Items***
- ***Staff***
- ***Monthlysale***
  - *For the sale in Each Month*
- ***Mylist***
  - *For the billing purpose*
- ***Mysale***
  - *For the sale of Each Item*

- The Django Framework is used along with the SQL Database.
- The Template Inheritance Property of the Django Framework is in use .
- The Whole Project is developed in Visual Studio Code as an IDE and the Editor .

The Database management is done in the views Section of the Django Framework.

## Conclusion and Future Plans:

- The restaurant Management system aims to bring ease in managing the works of the restaurant .
- We will try to include the Payment Gateway part in the customer service , and will inculcate some other features like specific orders and Table managing
- Also, we intend to learn ReactJS for better frontend part of the project and make it attractive .

Thank You
